2. When I searched for my IP address in Chrome and Microsoft Edge, the IP address finder was able to locate me in Kansas City through my public Google Fiber IP, which is my real IP. When I used the Tor Browser, it showed a completely different IP address that was in Norway, (185.243.218.226), this occurred because it used a VPN to hide my real location. This proves that HTTPS doesn't always mean it secures anonymity, and you can still see your real IP address.
